

Motivation Letter for Masters in Computer Science

Dear Sir/Madam

With this motivation letter I would like to make my application for the admission into the engineering program of the University. I have always been the fanatic of the program from the University ever since I completed my graduation in the same engineering domain.

I have just completed my graduation in the engineering last year and now I'm willing to take my academic ahead so that I can grow my knowledge in the field, since it is my only motivation to do best in the domain.

I'm very innovative and keen person and being the engineering student I'm always up in innovation and I believe that I would be considered, as the worthy candidate for the admission purpose in the institution.

Your Truly,
